DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-9 and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Hirata (US5145792).

With respect to claims 1-9 and 11, Hirata shows in Fig. 13e and 13f a tunable semiconductor laser comprising an optical cavity resonator having first and second reflectors and active region 21 interposed between the reflectors, a multiplicity of RORs, a first waveguide that includes the active region, a second waveguide that includes the ROR gain media, the second waveguide being weakly coupled to the first waveguide, and means for pumping selected ones of the ROR gain media (col.8, l.32-50).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 10 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hirata (US5145792) in view of Alferness et al. (US4852960). Hirata disclose all limitations of the claim except for a transmitter and a receiver. Alferness teaches in Fig.6 a transmitter 601 and a receiver 661. For the benefit of a WDM system, it would have been obvious to one having ordinary skill in the art at the time the invention was made to provide Hirata a transmitter and a receiver as taught by Alferness.
